

EASYLABEL Multi-User Version

EASYLABEL Multi-User version is most suitable for use in a Network environment where only a single licensing key is needed to print from multiple workstations on a network. The benefits of Multi-User are:

- **Cost Effectiveness** – Compared to the Platinum version, the cost of ownership for a comparable quantity of licenses is less expensive.
- **Files Are Shared On The Network** - All associated files, (formats, databases, images, serial files, report files) can be stored on the network. The same files will be accessible to all users and avoids confusion caused by multiple files in different locations. File maintenance, for example backup, becomes simplified.
- **One Licensing Key** – Only one licensing key is needed for multiple users.
- **Print From Anywhere** - Users can print from any workstation no matter where it is located, providing UDP packets can be passed from the workstation to the PC/Server with the licensing key attached to obtain a license. EASYLABEL can be installed and used from every PC on your network. *(Example: with a 5 user license, users from any 5 workstations on your network can use the EASYLABEL program simultaneously. If a 6th user tries to open EASYLABEL, they will see a message that all licenses are being used. When one license is returned by a user closing EASYLABEL, the 6th. User will then be able to use the EASYLABEL program).*
- **Offline Mode** – Even if there is a problem where the licensing key is not detected on the network, you will still be able to use the EASYLABEL program for 7 days while the problem is being corrected so long as the EASYLABEL program is not closed.

For more information, please see our Multi-User FAQ at <http://www.tharo.com/easylabel-multi-user-faq/>

Please do not confuse the Multi-User version with the Terminal Server version. Please see the Terminal Server version FAQ at <http://www.tharo.com/easylabel-terminal-server-faq/>
