EASYLABEL Terminal Server Version

EASYLABEL Terminal Server version allows you to run the EASYLABEL program on Windows Terminal Server platform. Client workstations are installed with Client Terminal Services which enable them to access the EASYLABEL program installed on the Terminal Server. Only one licensing key is needed and connected to the Terminal Server. The benefits of the Terminal Server version are:

- **Centralized Administration** – Only one licensing key is needed and only one EASYLABEL program is needed to be installed. All associated EASYLABEL files can be located in one location on the Terminal Server to ease maintenance.
- **Unlimited Users** – An unlimited amount of users can access EASYLABEL simultaneously. (Note: Keep in mind that the more users that are connected, the higher the hardware requirements will be).
- **Print From Anywhere** – Any user that can access the Terminal Server can use EASYLABEL. All that is needed is a PC or dumb terminal.
- **Low Cost** – Since users can access EASYLABEL with any station that can connect to the Terminal Server, updated computer hardware is not a concern.

For more information, please see our Terminal Server version FAQ at <http://www.tharo.com/easylabel-terminal-server-faq/>

Please do not confuse the Terminal Server version with the EASYLABEL Multi-User version. Please see the EASYLABEL Multi-User version FAQ at <http://www.tharo.com/easylabel-multi-user-faq/>
